## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments, see pages 6-8, filed September 2, 2005, with respect to claims 1-7, 11, and 22-23 have been fully considered and are persuasive. The rejection of claims 1-7, 11, and 22-23 has been withdrawn.

### ***Allowable Subject Matter***

2. Claims 1-7, 11, and 22-23 are allowed.

3. The following is an examiner's statement of reasons for allowance:

4. The main reason for allowance over the prior art, most notably that of Lo et al. (USPN 6,566,897) is that Lo et al. fails to teach all the limitations of claims 1 and 11 taken as a whole and further including the method step and means for measuring an average intensity of detected electrons over a range of filter bias voltages such that focusing of the beam is carried out without necessitating the acquisition of a voltage contrast image.

5. The remarks by the applicant point out that the newly added limitations are not contained in Lo et al., a point on which the examiner agrees. The examiner further agrees with the assertion that Lo et al. requires the taking of a voltage contrast image to carry out focusing. As pointed out in the disclosure of Lo et al., the prior art device and method require, and are based on, voltage contrast imagery to focus a charged particle beam and do not determine a cut off voltage by measuring the average intensity of detected electrons, but rather precharge a region of a sample to serve as a contrasting image to a region subsequently imaged (Lo et al. Col. 3-5).

6. Claims 1 and 11, and their respective dependent claims 2-7 and 22-23 therefore distinguish over the prior art.

7. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
